Dr Terry Martin

CCAT 2017

Clinical Considerations in Aeromedical Transport Foundation Level

AEROMEDICAL TRANSPORT
CCAT FEBRUARY 2017

Retrieval and Transfer Medicine

This course is primarily designed for doctors, nurses and paramedics who are preparing to work as flight medical crew, and for all who are involved with patients transfers. The objective of the course is to give a thorough foundation in the art and science of retrieval and transport medicine. As such, it is an excellent primer for candidates of the Diploma in Retrieval and Transfer Medicine examination of the Royal College of Surgeons of Edinburgh and other similar exams. It is a very practical course, taught by experts in aviation physiology, aerospace medicine, retrieval medicine, intensive care, emergency medicine and pre-hospital care. It addresses relevant issues of the special physical, physiological and psychological stresses that are important in the various transport environments, and describes the conditions which are susceptible during transfers by land and by air, and how patients may be safely and efficiently carried.

Delegates are not required to have previous training or experience in ground ambulance, or fixed wing or helicopter air ambulance operations. However, the course presents opportunities for those seeking entry into this career path during its fascinating and intense 6-day educational program. CCAT Training is proud of its long and successful global history in the provision of gold standard educational experiences.

Clinical Care by Air

Course Programme

- **1 day** of *extreme physiology*
 - Transport physiology
 - Biodynamics
 - Environmental extremes
- **2 days** of *clinical aspects of retrieval medicine*
 - Pathophysiology
 - Clinical concerns
 - Transportable medical equipment
- **2 days** of *logistic & command issues in medical transport*
 - Organisation al issues in transport & retrieval operations
 - Medicolegal issues
 - Standards and safety

Course visits may include: an airline training centre, a HEMS service, a fixed wing air ambulance service and/or sea survival school. Each year the programme is modified for the participants registered.

CCAT Aeromedical Training can not guarantee visits provided by external agencies.
